

You should reject NAB's petition 04-160. As a subscriber to satellite radio, they should be able to provide ANY and ALL programming content. There is NO reason the NAB should block XM's right to provide paying customers with local news and weather. If commercial broadcasters were serving my needs properly, and the needs of the general public, there would be no need for satellite. But they are not and then come crying to the FCC for protection. XM is serving my needs and should not be limited in its programming content.
